

VIPER METAL

NORDIC WASTE BALER

Nordic Baler is primarily developed for baling household waste material.

Fully automatised prosess creates rectangle wrapped bale independently since the material is loaded into the balers hopper.

Thanks to machine mobility there is possibility to pack the baler for road transportation in short period of time and continue working with short notice in some other location.

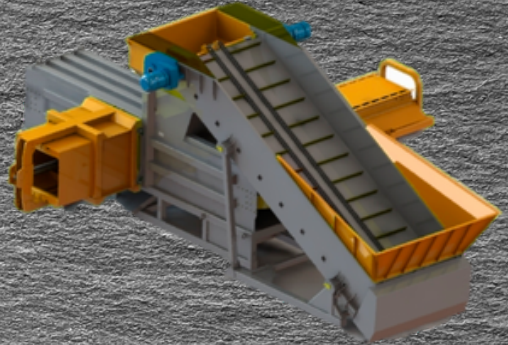

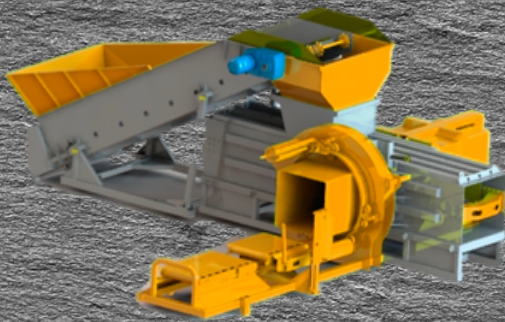

The device has a high capacity of 15-20 tonnes per hour. Single bale volum approximately 1,2 m3.

Finished bale shape and weight is optimized for road transportation as well as long term storage.

No doubt there is no similar product on the market available with same properties what Nordic Waste Baler can offer.

INFORMATION

NORDIC WASTE BALER

| | |
|-------------------------|--------------------------|
| Bale size (mm) | 1250 x 1100 x 1150 WxHxD |
